

Far Deep Void S2N2, vase

Duccio Maria Gambi

EDITION
Delvis (Un)Limited - unique piece

FDV is a collection of sculptural vases that literally emerge from a block of polystyrene. The block is first dissolved from the inside using acetone to create a partially controlled void, into which concrete is poured. As it flows, a thin, fluid layer of the mixture adheres to the rough inner surface.

DETAILS

BODY:	Pigmented concrete
SIZE:	L: 32 W: 23 H: 36 cm L: 12.60" W: 9.06" H: 14.17"
NET WEIGHT:	30 kg, 66.14 lb
YEAR:	2022
PRICE:	Upon request

QUOTE:

"The Far Deep Void collection uses synthetic materials to mimic the form of organic matter. The vases are made by creating a spontaneous mold from a block of polystyrene"
— Duccio Maria Gambi

Exhibition:

Dark Times Bright Signs

“Times have been dark” more than once in history, and “the world has been falling apart” for centuries, countless times, generation after generation. Today, though, dystopia feels particularly realistic—certified, experienced electronically in real-time, and reinforced by scientific theories now accessible to all. Apocalyptic thinking not only surrounds us—it has become mainstream. Driven by this condition of hyperawareness, swept by waves of eco-anxiety, saturated by conflict and forced to face a rapidly-evolving reality—a new generation is developing new languages, perhaps forms of reworking, toward new balances, of hope. At the same time, though, the apocalyptic scenarios around us—or rather, upon us—cannot help but permeate our gaze, consciously or otherwise, shaping the creative language of today and the way we parse the world.

BIO DESIGNER:

Duccio Maria Gambi approaches design from a variety of directions, defining his practice across the broad boundary between art and design. Since 2012, and the opening of his workshop in Paris—where he lived for five years—he has maintained, in his projects for galleries and private commissions, a research-driven, storytelling approach, in which each work stands as a momentary reflection within an ongoing investigation into structures, materials, processes, and time. He continues this research in his current atelier and studio in his hometown, Florence. A large part of his work revolves around stone, concrete, and the creation of value from humble materials through artistic intervention.
